IDENTIFIERS *North Carolina Community College System

ABSTRACT

In fall 1988, 45% of the curriculum faculty teaching in the North Carolina Community College System (NCCCS) were employed full-time, and 55% were employed part-time. By 1992, there had been a 14.8% increase in the number of curriculum faculty, but no change in the proportions of full- and part-time curriculum faculty. At 45%, the proportion of full-time curriculum faculty in North Carolina exceeds that of the nation, which has a full-time proportion of 40%. These figures do not consider the teaching loads of full- and part-time faculty, an important indicator of instruction on campus. A college may have a majority of part-time instructors and still have substantially more than a majority of instruction delivered by full-time faculty. In fall 1991, 79% of the NCCCS part-time faculty taught nine credit hours or less, while 89% of full-time faculty taught 10 credit hours or more. Both the state and national figures also cloak the broad variation found within a large community college system. In 1992, the proportion of full-time faculty in the individual colleges in the NCCCS ranged from 23% to 85%. Between 1988 and 1992, 28 of the 58 community colleges in the NCCCS had an increase in the proportions of full-time faculty, with half of the increases being 5 percentage points or less and half being 6 percentage points or more. RESEARCH BRIEF

August 1993

No. 1993-01

A Publication of the Planning and Research Section, N.C. Dept. of Community Colleges

EXAMINING THE EMPLOYMENT MIX OF FULL AND PART-TIME CURRICULUM FACULTY

The quality of a college faculty is fundamental to its effectiveness. The Southern Association of Colleges and Schools (SACS) devotes a sizeable section of the Criteria for Accreditation to matters of faculty. One issue concerns the extent to which community colleges are "controlling the employment of part-time faculty." SACS criteria require that:

the number of full-time faculty members must be adequate to provide effective teaching, advising, and scholarly or creative activity, as well as appropriate to participate in curriculum development, policy making, and institutional planning and governance. The employment of part-time faculty members, however, can provide expertise to enhance the educational effectiveness of an institution but the number of part-time faculty members **must** be properly controlled. Part-time faculty members teaching courses for credit **must** meet the same requirements for professional, experiential and scholarly preparation as their full-time counterparts teaching in the same disciplines (Section 4.4.3).

Data available to the Planning and Research Section of the North Carolina Department of Community Colleges (DCC) allow analysis of the numbers of faculty who are employed full-time and part-time. This research brief will detail those data as a percentage, or proportion, of total curriculum faculty employment. The source of data is the faculty/staff survey conducted each October by the Information Services Section of DCC.

In the fall of 1988, 45% of curriculum faculty in the N.C. Community College System were employed full-time and 55% part-time. Four years later, while there has been a 14.8% increase in the number of curriculum faculty, there has been no change in the proportions of full and part-time curriculum faculty.

The proportion of full-time curriculum faculty in North Carolina, at 45%, exceeds that of the nation, which has a full-time proportion of 40%, according to information from the American Association of Community Colleges. National proportions have also remained stable, at least since 1986. This represents a historic decline from a 44% proportion of full-time faculty in 1976 (American Council on Education, Community College Fact Book, Macmillan Publishing Co., New York, 1988, p. 38).

Note that this report does not consider teaching loads of full and part-time faculty, which are an important indicator of the nature of instruction on campus. A college may have a majority of part-time instructors and still have substantially more than a majority of instruction delivered by full-time instructors, depending on teaching loads. From the Profiles of Faculty Employed by North Carolina Community Colleges, an analysis of a special survey conducted by the Planning & Research Section of DCC, it is known that in fall of 1991, 79% of part-time faculty taught nine credit hours or less and 89% of full-time faculty taught ten credit hours or more. Full-time faculty are teaching the larger loads in the system.

Table 1 displays summary statistics relating to proportions of full and part-time curriculum faculty for the 58 public community colleges in North Carolina. Overall, the table reflects a system of colleges that have maintained a stable mix in the proportion of full and part-time curriculum faculty from 1988 to 1992, while growth in employment of curriculum faculty has averaged almost 15%. In the fall of 1988, the mean proportion for full-time curriculum employment among the 58 colleges was 48.4%, virtually unchanged as of fall 1992 with 48.1%.

Table 1: Summary Statistics for N.C. Community Colleges of Curriculum Faculty Totals and Full and Part-Time Proportions, Fall 1988 and Fall 1992

	Fall '88			Fall '92		
	# Curr. Faculty	% Full-Time	% Part-Time	# Curr. Faculty	% Full-Time	% Part-Time
Total Faculty	7348			8443		
Mean	126.7	48.4	51.6	145.6	48.1	52.0
Median	99	48.5	51.5	116	46.5	53.5
Minimum	10	21	20	15	23	15
Maximum	792	80	79	780	85	77

But the state and national figures cloak the broad variation found within a community college system comprising 58 institutions. Notable in Table 1 is the wide range in proportions of full-time faculty among the institutions, from 21% to 80% in 1988 and 23% to 85% in 1992. Additionally, many colleges experienced large shifts, both positive and negative, in their proportion of full-time faculty from 1988 to 1992 as displayed in Figure 1.

Figure 1

Distribution of Full-Time Curriculum Faculty Proportions, Fall 1988 & 1992

Table 2 shows the proportions of full and part-time curriculum faculty for the 58 community colleges in fall 1988 and fall 1992. The colleges are classified into five groups based on their 1991-92 full-time equivalent (FTE) student enrollment. This classification was selected for its use in the document, 1993 Critical Success Factors For the North Carolina Community College System, when reporting institutional information. Also, colleges of similar size are likely to have comparable resources. However, correlations between size of college enrollment and faculty proportions do not exist (Pearson $r = -0.079$ for 1991-92 FTE & 1992 full-time faculty proportions. This is not statistically significant at the .05 level of confidence, two-tail test).

The last column of Table 2 shows the percentage point increase or decrease in the proportion of full-time curriculum faculty from fall 1988 to fall 1992. Twenty-eight colleges had an increase in the proportions of full-time faculty, with half (14) of the increases being five percentage points or less and half (14) being six percentage points or more. Twenty-nine colleges had a decrease in proportions of full-time faculty, with eight of the decreases being five percentage point or less, and twenty-one being six percentage points or more. One college had no change in its proportion of full-time faculty.

The dispersion of values defy simple correlations between faculty proportions and other variables such as size of college enrollment, geographic location, and urban/rural designations. This suggests the value of each college circumspectly examining the changing status of its employment mix against multiple benchmarks including the institution's mission, values and financial decisions in determining if the college is abiding by SACS criteria in "controlling the employment of part-time faculty."
